NotebookLM Extraction Prompt Library

For building a Jain Kundali Core Engine

Source Texts in this Notebook

तिलोयपण्णत्ती · त्रिलोकसार · सूर्यप्रज्ञप्ति · चन्द्रप्रज्ञप्ति

ज्योतिषकरण्डक · गणितसारसंग्रह · षट्खण्डागम-धवला

7 Modules · 42 Extraction Prompts · 4 Artifact Generation Prompts

How to Use This Document

This document contains structured prompts to copy-paste directly into NotebookLM chat. Work through each module in order — each module targets one specific component of the Jain Kundali Core Engine.

Step	Action	Purpose
1	Open your NotebookLM notebook with all Jain Jyotish texts loaded	Ensure all 7 source texts are in READY state
2	Copy ONE prompt at a time into the chat box	NotebookLM works best with focused, single queries
3	After each response, click 'Save to note' in NotebookLM	Build a permanent knowledge base from responses
4	Move to the next prompt only after saving	Avoid losing extraction results
5	At end of each module, generate the specified Artifact	Capture structured data for engine development
6	Export all saved notes as a document	Use as your engine's source-of-truth reference

Important: Always ask NotebookLM to include the source text name and verse/page number with every answer. Add this to any prompt: *"Please cite the source text, chapter, and verse/page number for each point."*

 MODULE 1

ग्रह एवं खगोलीय पिण्ड · Celestial Bodies & Planetary System

Engine component: Graha data table — names, nature, loka, karma association

These prompts extract all celestial body data — the foundation of your planetary mapping engine.

M1.1

ग्रहों की सूची *List of All Celestial Bodies*

From ALL sources in this notebook, list every celestial body mentioned – graha (planet), surya (sun), chandra (moon), nakshatra (asterism), rahu, ketu, and any others. For each provide: (1) Jain/Prakrit name, (2) Sanskrit equivalent, (3) Hindi name, (4) nature – shubh or ashubh, (5) which loka they reside in, (6) any qualities attributed to them. Format as a detailed table. Cite source text and verse number for each entry.

Here is a detailed table of the celestial bodies mentioned across the provided sources, detailing their linguistic names, astrological nature, the cosmic realm they reside in, and their specific qualities according to Jain cosmology and Bharatiya (Indian) Jyotish.

Celestial Bodies in Jain Cosmology & Bharatiya Jyotish

Celestial Body	(1) Jain/Prakrit Name	(2) Sanskrit Name	(3) Hindi Name
Sun	Suriya(सूरि य) / Sura (सूर)	Surya(सूर्य) / Ravi (रवि)	Surya (सूर्य)

M1.2

जैन बनाम वैदिक *Jain vs Vedic Planetary Differences*

How many suns, moons, and planets exist according to these Jain texts? How does this differ from Vedic astronomy? List every specific number or count mentioned — for example, the Tiloyapannatti view on the count of suns and moons in Jambudvipa and other dvipas. Include exact verse references.

Based on the provided texts, there is a distinct and fascinating divergence between Jain cosmology and Vedic/Hindu astronomy regarding the number and arrangement of celestial bodies.

Here is a detailed breakdown of the specific numbers, counts, and differences as described in the sources:

1. Count of Suns and Moons

Jain Cosmology: Jain texts describe a unique geographical model of concentric islands and oceans, with Mount Meru at the center. The celestial bodies duplicate and revolve around this central mountain.

- **Jambudvipa (The Central Island):** The texts explicitly state that there are exactly **2 Suns** and **2 Moons** in Jambudvipa.
- **Other Dvipas (Islands) and Oceans:** The texts note that this system of multiple suns and moons extends outward into the *Lavan Samudra* (Salt Ocean), *Dhatakikhand*, *Kalodadhi* (Black Water Ocean), and *Pushkarardh* dvipa. (Note: While traditional Jain cosmology assigns specific mathematically expanding numbers to these outer realms—like 4, 12, 42, etc.—the provided excerpts specifically quantify only the 2 suns and 2 moons of Jambudvipa).
- **Visibility:** Because the two suns and two moons of Jambudvipa alternate their revolutions around Mount Meru, only one Sun and one Moon are visible to observers on Earth at any given time.

M1.3

ज्योतिषी देव Jyotishi Devs – Celestial Beings

From Tiloyapannatti and Trilokasara specifically, extract complete details of all Jyotishi Devs (ज्योतिषी देव) – the divine celestial beings. For each type provide: (1) name, (2) their loka/residence, (3) their function or role, (4) their lifespan (ayushya), (5) their movement pattern, (6) their count/number, (7) any karma or spiritual qualities. Format as a comprehensive table with source citations.

Based on the detailed cosmological descriptions in the *Tiloyapannatti* (specifically the 7th Mahadhikara) and the *Trilokasara*, here is a comprehensive table extracting the specifics of the Jyotishi Devas (ज्योतिषी देव - divine celestial beings of the luminary world).

According to these texts, the Jyotishi Devas reside in the **Jyotirloka**, a realm situated in a space measuring 1 Raju in length and breadth, and 110 yojanas in thickness, located directly above the *ChitraPrithvi* (the base of the middle world).

Comprehensive Details of Jyotishi Devas

(1)Name/ Type	(2)Loka/ Residence (Height fromChitra Prithvi)	(3)Function orRole	(4)Lifespan (Ayushya)& Sustenance
Chandra(Moon)	880 Yojanasabove the Chitra Prithvi.	Acts as the Indra(SupremeChief) of the Jyotishi Devas.	Specific lifespans (Ayu), diet (Ahar), and breathing (Ucchvas) are systematically defined in the texts (exact numerical

M1.4

ग्रह गति *Planetary Movements & Orbits*

Describe the movement system of celestial bodies as explained in *Suryapragnapti* and *Chandrapragnapti*. How do the sun and moon move in Jain cosmology? What are the specific orbital paths, speeds, and directions mentioned? Include any mathematical values given for distances or orbital periods. Cite verse numbers.

Based on the *Suryapragnapti*, *Chandrapragnapti*, and supporting texts like *Trilokasara* and *Tiloyapannatti*, the movement of celestial bodies in Jain cosmology is a highly structured, mathematically precise system that revolves around concentric geographical realms and dual celestial entities.

Here is a detailed breakdown of the movement system, orbital paths, directions, and mathematical speeds of the Sun and Moon.

1. The Dual System and Alternate Movement

A fundamental premise of Jain cosmology is that the central island, **Jambudvipa**, is illuminated by **2 Suns and 2 Moons**.

- Because of the massive presence of Mount Meru in the center, these celestial bodies move in an **alternate (ekantar) pattern**.
- While one Sun/Moon traverses the visible sky over Bharata Kshetra, its counterpart is traversing the diametrically opposite side of Mount Meru, ensuring continuous timekeeping across the vast geography.
- The subject matter of the *Chandrapragnapti* is nearly identical to that of the *Suryapragnapti*, differing primarily in its focus on the Moon's specific kinematics.

2. Orbital Paths (Vithis / Galiyan / Mandalas)

The suns and moons do not move in a single fixed orbit; rather, they spiral outward and inward across

M1.5

राहु-केतु *Rahu, Ketu & Shadow Planets*

What do these texts say about Rahu and Ketu specifically? In Chandrapragnapti, how is the moon's waxing and waning explained in relation to Rahu? Is Ketu mentioned separately? What qualities and effects are attributed to them in a Jain framework? Include all references with citations.

Based on the *Suryapragnapti*, *Chandrapragnapti*, and supporting texts like *Trilokasara* and *Tiloyapannatti*, the movement of celestial bodies in Jain cosmology is a highly structured, mathematically precise system that revolves around concentric geographical realms and dual celestial entities.

Here is a detailed breakdown of the movement system, orbital paths, directions, and mathematical speeds of the Sun and Moon.

1. The Dual System and Alternate Movement

A fundamental premise of Jain cosmology is that the central island, **Jambudvipa**, is illuminated by **2 Suns and 2 Moons**.

- Because of the massive presence of Mount Meru in the center, these celestial bodies move in an **alternate (ekantar) pattern**.
- While one Sun/Moon traverses the visible sky over Bharata Kshetra, its counterpart is traversing the diametrically opposite side of Mount Meru, ensuring continuous timekeeping across the vast geography.
- The subject matter of the *Chandrapragnapti* is nearly identical to that of the *Suryapragnapti*, differing primarily in its focus on the Moon's specific kinematics.

2. Orbital Paths (Vithis / Galiyan / Mandalas)

The suns and moons do not move in a single fixed

M1.6

ग्रह गुण Planetary Qualities & Characteristics

Create a complete characteristics table for each celestial body mentioned across all sources. Include: color (varna), size, shape, speed of movement, associated deva/deity, karma type it governs, and any predictive quality mentioned. Also note if any Tirthankara is associated with a specific celestial body.

Here is a complete characteristics table for the celestial bodies mentioned across the provided Jain and Bharatiya Jyotish sources.

Characteristics of Celestial Bodies

Celestial Body	Color (Varna)& Elements	Size& Shape	Speedof Movement	Asso c Deva y
Surya (Sun)	Red (Lal). Represents Agni (Fire) tattva. Associated with Kshatriya Varna.	Hemisph ere (Ardh-golak) pointing upwards.	Varies by path: 5251 29/60 yoj anas/mu hurta (innermo st) to 5305 1/2 yojan as/muhu rta (outermo st).	Prati (Co-c) Jyoti Deva
Chandra (Moon)	White (Sh wet). Associated with Vipra	Hemisph ere (Ardh-golak) pointing upwards.	Varies by path: 5072 58/60 yoj anas/mu	Indra prem Chiel Jyoti Deva

★ MODULE 2

नक्षत्र एवं राशि • Nakshatra & Rashi System

Engine component: 28-nakshatra table with Jain names, lords, qualities & karma types

These prompts build your nakshatra-rashi mapping — the core birth-chart positioning system.

M2.1

नक्षत्र सूची Complete Nakshatra List

List ALL nakshatras mentioned in these texts. Jain texts traditionally use 28 nakshatras. For each provide: (1) Jain/Prakrit name, (2) Sanskrit name, (3) Hindi name, (4) ruling deity or deva in Jain framework, (5) nature – shubh/ashubh/mishra, (6) associated karma type, (7) any auspicious or inauspicious qualities. Also note: does Jain nakshatra system start from a different point than Vedic? Cite sources.

Based on the provided texts, specifically the detailed cosmological and astrological expositions in *Bharatiya Jyotish* (drawing from Jain Agamas like *Prashnavyakarana*, *Suryapraghnapti*, and *Samavayang*), here is a comprehensive breakdown of the 28 Nakshatras.

Does the Jain Nakshatra System Start from a Different Point?

Yes. While modern Vedic astrology universally begins its Nakshatra sequence with *Ashvini* (and ancient Vedanga Jyotish started with *Krittika*), Jain canonical texts present unique starting points based on cosmological divisions:

- Dhanishtha as the Starting Point:** In the Jain text *Prashnavyakarana*, when categorizing the karmic and predictive families (*Kula*, *Upakula*) of the asterisms, the enumeration explicitly begins with **Dhanishtha** (धणि ढा कुलं), placing it first in the cosmic order.
- Krittika as the Eastern Door:** The *Samavayang Sutra* and *Suryapraghnapti* divide the 28 Nakshatras into four directional "doors" (Dvaras) of the universe. This mathematical sequence starts with **Krittika** as the first of the seven Nakshatras guarding the Eastern Door (कत्ति आ इया सत्तणक्ख ता पुव्वदारिआ).
- Inclusion of Abhijit:** Unlike standard 27-nakshatra Vedic charts used today, Jain cosmology strictly mandates a **28-Nakshatra system**, incorporating *Abhijit*

M2.2

राशि चक्र *Rashi / Zodiac System*

Do these texts mention a 12-rashi (zodiac sign) system? If yes, list all 12 rashis with their Jain names, ruling devs, and qualities. If the texts use a different classification system instead of rashis, describe it completely – what replaces the zodiac in Jain Jyotish? Include all references with verse numbers.

Based on the provided texts, there is a fascinating historical progression in Jain Jyotish regarding the zodiac.

Early Jain cosmological texts (like the *Suryapragnapti*, *Chandrapragnapti*, and *Samavayang Sutra*) do not explicitly use the 12-Rashi (zodiac sign) system. Instead, they relied on a highly detailed alternative framework. However, **later Jain astrological treatises** (such as the 8th-century *Kuvalayamala* by Udyotan Suri and subsequent predictive texts) fully embraced and detailed the 12-Rashi system.

Here is a complete breakdown of both systems as described in the sources.

Part 1: The 12-Rashi System in Later Jain Jyotish

Dr. Nemichandra Shastri’s *Bharatiya Jyotish* provides a comprehensive classification of the 12 Rashis (Zodiac Signs), their ruling planets (Swami), and their innate qualities utilized for birth chart (*Kundali*) analysis.

#	Rashi (Sign)	
1	मेष (Mesha / Aries)	मंगल

M2.3

जन्म नक्षत्र *Janma Nakshatra Analysis*

What do these texts say about the nakshatra at the time of birth (janma nakshatra)? Is there a framework for analyzing the qualities, challenges, and tendencies of a person based on their birth nakshatra? List any predictive qualities associated with being born under each nakshatra. Include verse citations.

Based on the provided texts, the **Janma Nakshatra** (the constellation the Moon occupies at the exact time of birth) is the foundational pillar of Indian and Jain astrological analysis. It dictates a person's inner nature, subconscious tendencies, lifelong planetary periods (Dashas), and karmic challenges.

Here is the comprehensive framework for analyzing a person based on their birth nakshatra, along with the predictive qualities associated with each, as detailed in the sources.

1. The Frameworks for Nakshatra Analysis

The texts provide several distinct systems to evaluate the qualities and challenges of a person based on their Janma Nakshatra:

A. The Tara (Navatara) System (Karmic Life Cycles) A person's life experiences are mapped by counting from their Janma Nakshatra. The texts (*Bharatiya Jyotish*, pp. 128-129, 209-210) cite the ancient verse "*Janmasampadvipatksema pratyari sadhakastatha...*", which divides all nakshatras into groups of 9 karmic indicators (*Taras*) relative to the birth star:

1. **Janma:** Body and physical self.
2. **Sampatkar:** Wealth and prosperity.
3. **Vipatkar:** Danger, distress, and karmic debts.
4. **Kshemakar:** Well-being and security.
5. **Pratyari (Pratvar):** Obstacles and enemies.
6. **Sadhak:** Success and fulfillment of desires.
7. **Nidhan:** Death, destruction, or severe hardship.

M2.4

नक्षत्र-कर्म संबंध *Nakshatra-Karma Connections*

What connections do these texts establish between specific nakshatras and types of karma (e.g., Gyanavaraniya, Mohaniya, Ayushya, etc.)? Are certain nakshatras associated with heavier or lighter karma? Any nakshatra linked to specific spiritual milestones like diksha, moksha, or kevalgyan? Include all such references with citations.

The provided texts do not establish a direct, one-to-one mapping between specific individual Nakshatras and the 8 classical Jain karmas (such as *Gyanavaraniya*, *Mohaniya*, *Ayushya*, etc.).

According to *Bharatiya Jyotish*, astrology is considered a worldly (*Laukik*) science where celestial bodies act strictly as "indicators" (*Soochak*) of a soul's accumulated past karma (*Purvoparjit Karma*), rather than the creators of that karma,. Meanwhile, the *Shatkhandagam* extensively details the 8 primary karmas—Gyanavaraniya, Darshanavaraniya, Vedaniya, Mohaniya, Ayushya, Nama, Gotra, and Antaraya—but treats their bondage and destruction as a purely internal spiritual mechanism (*Purushartha*), independent of astrological asterisms,.

However, the texts **do** categorize Nakshatras based on whether they indicate "heavier" (difficult/malefic) or "lighter" (auspicious/benefic) karmic payloads, and they discuss spiritual milestones like *Diksha* and *Moksha* through specific frameworks.

1. Heavier vs. Lighter Karma in Nakshatras

While not using terms like *Gyanavaraniya*, the texts classify the karmic weight or worldly friction a soul will experience based on the nature (*Sanjna*) and junction points of the Nakshatras:

- **Heaviest Karma (Gandant & Arishta):** The most severe karmic payload is associated

M2.5

नक्षत्र देव *Nakshatra Devatas & Tirthankaras*

For each nakshatra, identify the ruling deity as named in Jain texts — not Vedic nakshatra lords. Are any Tirthankaras associated with specific nakshatras? Include the Varur tradition mappings if mentioned. Also list any planetary lords of nakshatras mentioned in Jyotishkarandaka or other sources. Cite all references.

Based on the provided texts, there are several important clarifications regarding how Jain astrological texts handle Nakshatra deities, Tirthankara associations, and planetary lords.

Most notably, the texts reveal that **Jain Jyotish does not use a separate set of "Jain-only" deities** for the Nakshatras, but rather shares the foundational Pan-Indian (Vedic) deities. Furthermore, the provided sources **do not contain any mention of a "Varur tradition"** or its mappings.

Here is the detailed breakdown according to the sources provided:

1. Ruling Deities and Planetary Lords of the Nakshatras

According to both the *Shatabdi Panchang* used by the Jain community and Dr. Nemichandra Shastri's *Bharatiya Jyotish*, the ruling deities (*Devatas*) of the Nakshatras are identical to the standard Vedic tradition.

Additionally, the **Planetary Lords** (*Swami*) assigned to the Nakshatras are strictly based on the *Vimshottari Dashasystem*, which divides the rulership among the 9 planets (Navagraha).

Here is the complete mapping as detailed in the texts:

Nakshatra	Ruling Deity (Dev)
Ashvini	Ashvinikumar
Rharani	Kaal (Yama)

M2.6

नक्षत्र मुहूर्त *Auspicious Nakshatra Combinations*

List all nakshatra combinations described as auspicious (shubh) or inauspicious (ashubh) for: (1) birth, (2) vivah (marriage), (3) diksha (initiation), (4) yatra (pilgrimage), (5) griha pravesha (entering new home), (6) vyapar aarambh (starting business), (7) death/nirvana. Create a separate table for each event type.

Based on the provided astrological and cosmological texts, here are the separate tables detailing the auspicious (*Shubh*) and inauspicious (*Ashubh*) Nakshatra combinations for each requested event.

1. Birth (Janma)

Birth timing is governed by past karma rather than elected muhurtas, but the texts heavily emphasize the karmic weight (auspiciousness or danger) of the birth nakshatra.

Nakshatra Nature	Specific Nakshatra
Ashubh (Inauspicious)	Ashlesha, Jyeshtha, Mula, Magha, Ashvini
Shubh (Auspicious)	Pushya, Hasta, Abhijit,

 MODULE 3

काल / समय प्रणाली • Jain Time System

Engine component: Calendar engine — tithi, vara, yoga, karana, yuga, ara calculation

Jain time is fundamentally different from Vedic. These prompts extract the complete Jain Panchang system.

M3.1

अवसर्पिणी / उत्सर्पिणी *Avasarpini & Utsarpini Cycle*

Explain the Jain cosmic time cycle — Avasarpini (descending) and Utsarpini (ascending) — as described in these texts. For each of the 6 Aras in Avasarpini, list: (1) Ara name, (2) duration, (3) physical characteristics of beings born (height, lifespan), (4) spiritual qualities (karma load, ability to attain moksha), (5) social and natural conditions. Do the same for Utsarpini. Also: which Ara are we currently in, and what are its specific qualities?

Based on the provided Jain texts, the universe operates on an eternal cosmic time cycle known as the **Kalachakra**, which spans a massive duration of **20 Kodokodi Sagar** (a virtually incalculable unit of time).

This wheel of time is divided into two equal half-cycles of 10 Kodokodi Sagar each:

1. **Avasarpini (Descending Cycle):** A period where age, height, strength, intellect, and happiness gradually decrease.
2. **Utsarpini (Ascending Cycle):** A period where these exact same qualities gradually increase.

Each half-cycle is further divided into 6 distinct epochs or *Aras* (spokes). Here is the detailed breakdown of each Ara.

I. Avasarpini (The Descending Cycle)

1. Susham-Susham (Extreme Happiness)

- **(1) Duration:** 4 Kodokodi Sagar.
- **(2) Physical Characteristics:** Beings are born as twins (Yugal) who live as husband and wife. They have an infinite/immeasurable lifespan and attain youth in just 49 days.
- **(3) Spiritual Qualities:** This is the highest *Bhogbhumī* (realm of enjoyment). There is

M3.2

जैन पंचांग *Jain Panchang System*

Describe the complete Jain Panchang system as given in these texts. Explain: (1) how Tithi is calculated in Jain system, (2) the Jain names for each tithi, (3) Vara (day) – Jain names and their qualities, (4) Yoga – if mentioned, (5) Karana – if mentioned. How does this differ from Hindu Panchang? Include all mathematical formulas or calculation methods mentioned.

Based on the provided texts, the traditional Panchang (five-limbed calendar) is an intricate system of timekeeping used for both mundane and spiritual purposes. While it shares foundational elements with the broader Indian/Hindu astronomical system, Jain Jyotish incorporates specific rules for determining festivals and calculating the applicability of time units.

Here is the complete description of the Panchang system, its mathematical components, and its uniquely Jain applications according to the sources:

1. How Tithi is Calculated in the Jain System

A **Tithi** (Lunar day) mathematically represents one specific phase (Kala) of the Moon.

- **Mathematical Calculation:** It is calculated based on the angular distance between the Sun and the Moon. Every day, there is a mean difference of exactly **12 degrees** (12°) between the longitudinal movement of the Sun and the Moon. This 12-degree separation constitutes one complete Tithi.
- **The Jain 6-Ghati Rule (Difference from Hindu Panchang):** The major difference between Hindu and Jain Panchang lies in how a Tithi is *accepted* for observing fasts and festivals (*Parva Nirnay*). In the Hindu system, the *Udayavyapini* rule (whichever Tithi is active exactly at sunrise) is often sufficient for daily determination. However,

M3.3

पंचवर्षीय युग 5-Year Yuga Cycle

From *Suryapragnapti* specifically, explain the Jain 5-year Yuga cycle (Panchavarshiya Yuga). When does it begin? How is it used for calendar calculations? What are the 5 years named? How does the sun's position in the Abhijit nakshatra mark the cycle? Include all mathematical values and verse references.

The **Panchavarshiya Yuga** (5-year cosmic cycle) is the fundamental timekeeping mechanism in ancient Jain astronomy, extensively detailed in the *Suryapragnapti* and supporting Agamas like the *Samavayang Sutra*. It serves as a master synchronization cycle to align the solar, lunar, and asterism (Nakshatra) calendars.

Here is the complete breakdown of the Jain 5-year Yuga cycle according to the texts:

1. When does the Yuga begin and how does Abhijit mark it?

Unlike the *Vedanga Jyotish* which starts its Yuga on Magha Shukla Pratipada with the Sun in the Dhanishtha nakshatra, the Jain *Suryapragnapti* explicitly states that the **5-year Yuga begins on the first day of the dark fortnight of the month of Shravana (Shravana Krishna Pratipada)**.

At this exact moment, **the Sun enters the Abhijit Nakshatra**. This alignment marks the commencement of the Yuga and simultaneously triggers the first **Dakshinayana** (Southern Solstice) of the 5-year cycle.

The *Suryapragnapti* (p. 222) outlines this mathematically in the following Prakrit verse:

"पढमा बहुलपडिवए विइया बहुलस्स तेरिसीदिवसे । सुद्धस्स या दसमीये बहुलस्स य सत्तमीए उ ॥" **Meaning:** The first Dakshinayana of the Yuga begins on Shravana Krishna Pratipada in the Abhijit nakshatra. The second (Uttarayana) occurs on Magha Krishna Saptami in Hasta; the third (Dakshinayana) on Shravana Krishna Trayodashi in Ardra and so on.

M3.4

कालमान *Units of Time Measurement*

List all units of time mentioned in these texts from smallest to largest — from paramanu/nimisha up to cosmic time periods. Include: (1) Jain/Prakrit name, (2) equivalent in smaller units, (3) rough modern equivalent if calculable. Also list any specific time periods associated with celestial events like eclipses, solstices, or equinoxes.

The texts provide an incredibly precise and mathematically rigorous system of timekeeping, beginning with indivisible microscopic fractions of a second and expanding into virtually infinite cosmic epochs.

Here is the complete hierarchy of time units, ordered from smallest to largest, including their mathematical equivalents and modern conversions.

1. Micro-Time Units (Atomic to Daily)

The Jain cosmological texts (like *Shatkhandagam* and *Tiloyapannatti*) construct time based on the movement of a single atom (*Paramanu*).

(1) Jain/Prakrit Name	(2) Equivalent in Smal
Samaya (समय)	The absolute s indivisible unit of ti the time taken by a moving <i>Paramanu</i> (cross one space-po slow speed.
Avali / Avalika (आ वलि)	Innumerable (As Samayas.
Ucchvasa / Prana (उच्छ्वा स / प्रा ण)	Countable (<i>Sankhya</i> Exactly 3,773 Ucc make up one Muhurt
Stoka (स्तो क)	7 Ucchvasas / Prana
Lava (लव)	7 Stokas.
Nali/Ghati (नाली / घटी)	38.5 Lavas.

M3.5

शुभ-अशुभ काल *Auspicious & Inauspicious Time Periods*

What time periods, tithis, varas, or celestial configurations are described as shubh (auspicious) or ashubh (inauspicious) in Jain texts? List all such references. Are there specific times recommended for: puja, meditation (samayik), pratikraman, vrat, and other spiritual practices? Include any reference to Chaturmas or Paryushana in relation to celestial positions.

Auspicious (Shubh) and Inauspicious (Ashubh) Time Periods

According to the provided Jain and Bharatiya Jyotish texts, time periods are classified as auspicious or inauspicious based on intricate lunar phases (Tithis), days of the week (Varas), and their mathematical combinations.

- **Tithis and Siddha Yogas (Auspicious):** The 15 lunar days are grouped into five categories: **Nanda** (1st, 6th, 11th), **Bhadra** (2nd, 7th, 12th), **Jaya** (3rd, 8th, 13th), **Rikta** (4th, 9th, 14th), and **Purna** (5th, 10th, 15th). When these specific Tithis align with specific days, they form highly auspicious **Siddha Tithis** that grant success to any work: Nanda on Tuesday, Bhadra on Wednesday, Jaya on Thursday, Rikta on Friday, and Purna on Saturday.
- **Malefic Yogas (Inauspicious):** Specific combinations of days and Tithis form highly destructive periods known as **Dagdha, Vish, and Hutashan Yogas**, during which all auspicious activities are strictly prohibited (*varjit*). For example, a Sunday falling on the 12th Tithi creates a Dagdha yoga, on the 4th creates a Vish yoga, and on the 12th also creates a Hutashan yoga.
- **Karanas (Half-Tithis):** The **Vishti Karana** (commonly known as Bhadra) is considered extremely inauspicious, and performing any auspicious action during its exact duration is strictly prohibited.
- **Varas (Days of the Week):** Sunday, Tuesday, and Saturday are categorized as **Kur**

M3.2

उत्तरायण-दक्षिणायन *Uttarayana & Dakshinayana in Jain System*

How do these texts describe Uttarayana and Dakshinayana (sun's northward and southward journeys)? At what point in the nakshatra cycle do these begin in the Jain system — and how does this differ from Vedic Jyotish? What spiritual significance is given to these transitions? Include verse references.

Based on the provided texts, specifically the detailed comparative analysis in Dr. Nemichandra Shastri's *Bharatiya Jyotish*, the concepts of Uttarayana and Dakshinayana are explained through the unique geographical mechanics of Jain cosmology, which sharply contrast with the Vedic astronomical framework.

Here is how these texts describe the Sun's journeys, their starting points in the Nakshatra cycle, the differences between the traditions, and their spiritual significance.

1. Description of the Sun's Journeys (Ayanas)

In Jain cosmology, the Sun's "Northward" and "Southward" journeys are not described as moving across a celestial sphere relative to an equator, but rather as inward and outward spirals over the flat cosmic plane of *Jambudvipa* and the surrounding *Lavan Samudra* (Salt Ocean).

- **Uttarayana (Inward Journey):** During Uttarayana, the Sun moves from its outermost orbital path (situated over the *Lavan Samudra*) inward toward the center of *Jambudvipa*. As it spirals closer to the center, its orbital speed progressively slows down (*Mand Gati*). Because the Sun begins this journey on the massive outer orbit, Uttarayana starts with the shortest day of exactly 12 muhurtas (9 hours, 36 minutes) and ends with the longest day of 18 muhurtas (14 hours, 24 minutes).

🌟 MODULE 4

जन्मपत्री / कुण्डली आधार · Birth Chart Framework

Engine component: Core kundali logic — lagna, houses, birth nakshatra, chart structure

These prompts build the birth-chart framework — what a Jain kundali actually contains and how it is read.

M4.1

जन्म विश्लेषण आधार *Birth Time Analysis Framework*

What framework exists in these texts for analyzing the celestial state at the time of a person's birth? Is there any concept equivalent to a 'lagna' (ascendant) or rising sign? Is there a house system mentioned? List every reference to birth-time analysis, janma nakshatra determination, or birth-chart construction in any of these texts. Include verse citations.

Based on the provided texts, particularly Dr. Nemichandra Shastri's *Bharatiya Jyotish* and the *Shatabdi Panchang*, there is a highly developed, mathematically rigorous framework for analyzing the celestial state at the exact moment of a person's birth. This framework is known as **Jatak** (Natal Astrology) or **Phalita Jyotish**.

Here is the complete framework for birth-time analysis, including the equivalents for ascendants, house systems, and specific predictive methods, along with their verse and text citations.

1. Concept of the Ascendant: The 'Lagna' System

Yes, the texts explicitly use the concept of an ascendant or rising sign, which is called the **Lagna** (लग्न). It represents the specific zodiacal degree rising on the eastern horizon at the exact time of birth.

- **Ancient Nakshatra Lagna:** According to early Jain texts like the *Jyotishkarandaka* (c. 300 BCE), ancient astronomers originally calculated the ascendant based purely on the rising asterism, known as *Nakshatra Lagna*, before the 12-sign zodiac was adopted.
- **Ishtakal (Exact Birth Time):** To calculate the modern Rashi Lagna, the exact time elapsed from sunrise to the moment of birth must be determined. This elapsed time is called the **Ishtakal** (इष्टकाल),

M4.2

ज्योतिषकरण्डक – जन्म पद्धति

Jyotishkarandaka Birth Methods

From the *Jyotishkarandaka* specifically, extract every birth-related astrological concept. This text may reference concepts like Lagna, planetary positions, or predictive frameworks. List everything it says about: (1) determining auspicious birth times, (2) analyzing a person's future from birth chart, (3) planetary positions and their effects at birth. Include all verse numbers.

Based on the provided texts, specifically the analyses in Dr. Nemichandra Shastri's *Bharatiya Jyotish* and *Jain Jyotish Sahitya: Ek Drushti*, the **Jyotishkarandaka** (dated around 300– 400 BCE) is a highly ancient and foundational astronomical text.

However, regarding your specific requests about birth charts and predictive astrology, the texts reveal a crucial historical distinction: **The Jyotishkarandaka does not contain any predictive birth-related astrology (Phalita/Jatak Jyotish).**

The sources explicitly state that the *Jyotishkarandaka* represents an era where astrology was in an "undeveloped state similar to Vedanga Jyotish" (वेदांग-ज्योतिष के समान अविकसित अवस्था में है). It focuses purely on observational astronomy, mathematical timekeeping, and tracking the Sun and Moon.

Here is what the texts actually say regarding the *Jyotishkarandaka* and the concept of "Lagna", directly addressing your points:

1. Determining Auspicious Birth Times

- **Not present.** The *Jyotishkarandaka* does not deal with selecting auspicious times for human birth or activities based on planetary alignments. Instead, its timekeeping is focused on cosmic calendar calculations, specifically critiquing different systems of counting the

M4.3

भाव / स्थान *House System or Equivalent*

Do any of these texts mention a system equivalent to the 12 houses (bhavas) used in Vedic astrology? If not, what classification system is used to describe different domains of life (wealth, relationships, career, health, spirituality, death, moksha)? Extract any framework for life-domain analysis from Jain texts.

Yes, the provided texts explicitly detail a 12-house system known as "Bhavas" (भाव), which is identical to the system used in standard Vedic astrology.

According to Dr. Nemichandra Shastri's *Bharatiya Jyotish*, this 12-house framework is the primary method used in *Phalita Jyotish* (predictive natal astrology) to classify and analyze all different domains of a person's life.

Here is the complete framework for life-domain analysis through the 12 Bhavas, as extracted from the texts:

The 12 Domains of Life (Bhavas)

The texts list the consecutive names of the twelve houses as: **Tanu, Dhan, Sahaj, Suhrud, Putra, Ripu, Stri, Ayu, Dharma, Karma, Aay, and Vyaya.** Their specific domains are analyzed as follows:

- **1st House (Tanu / Lagna):** Represents the physical body, the self, and the immediate environment at the time of birth.
- **2nd House (Dhan):** Governs wealth and financial status. It is used to analyze combinations for extreme wealth (*Dhani Yoga*), poverty (*Daridra Yoga*), or bankruptcy (*Diwalia Yoga*).
- **3rd House (Sahaj / Tritiya):** Represents siblings, specifically used to calculate the number of brothers (*Bhratri sankhya*), as well as personal courage and effort.
- **4th House (Suhrud / Chaturtha):** Represents the mother (*Matru Yoga*), property/home (*Griha vichar*), vehicles (*Vahan vichar*), and

M4.4

दशा-अंतरदशा *Dasha System or Jain Equivalent*

Is there a Dasha system (planetary periods) or equivalent in Jain Jyotish? If not, how do these texts predict the timing of events in a person's life?

Extract any time-based predictive framework — whether based on age, nakshatra, planetary cycles, or karma-based time periods. Include all references.

Yes, there is a comprehensive Dasha system (planetary periods) utilized in the predictive branch of Jain and Bharatiya Jyotish.

While early Jain astronomical texts (like the *Jyotishkarandaka* and *Suryapragnapti*) focused purely on observational cosmology, later predictive texts (*Phalita Jyotish*) fully integrated sophisticated time-based frameworks to predict the timing of events in a person's life.

According to Dr. Nemichandra Shastri's *Bharatiya Jyotish*, life events are timed using three distinct frameworks: (1) **Planetary Cycles (Dasha)**, (2) **Age-Based specific years (Ayu Vichar)**, and (3) **Nakshatra-based Karmic cycles (Tara system)**.

Here are the extracted frameworks and their references:

1. The Dasha System (Planetary Cycles)

The texts explicitly state that a person's life is governed by cyclic planetary periods. Several Dasha systems exist, including *Ashtottari* (108-year cycle), *Yogini*, and the primary system, **Vimshottari Dasha** (120-year cycle).

- **Vimshottari Dasha Framework:** This system maps an ideal 120-year human lifespan, dividing it into specific periods ruled by the 9 planets. The division is: Sun (6 years), Moon (10 years), Mars (7 years), Rahu (18 years), Jupiter (16 years), Saturn (19 years), Mercury (17 years), Ketu (7 years), and Venus (20 years).

M4.5

आत्मा-कर्म-ग्रह संबंध

Soul-Karma-Planet

Connection

What do these texts say about the relationship between a soul's accumulated karma, their celestial conditions at birth, and their life experiences? Is there a direct causal framework stated — i.e., certain celestial conditions = certain karma type is dominant? Extract every philosophical statement connecting *grahachara* (planetary movement) and karma theory

.The texts explicitly deny a direct causal framework where celestial bodies create or dictate a soul's karma. Instead, they present a philosophy where planets act strictly as cosmic mirrors or indicators of a soul's previously accumulated karmic baggage.

Here are the extracted philosophical statements and frameworks connecting *grahachara* (planetary movement) and karma theory, primarily detailed in Dr. Nemichandra Shastri's *Bharatiya Jyotish*:

1. Planets are Indicators (Soochak), Not Creators (Niyamak)

The texts make a fundamental philosophical distinction between indicating an event and causing it. Planetary movements do not generate karma; they merely signal the ripening of past actions.

- "भारतीय ज्योतिष के लौकिक पक्ष में एक महत्त्वपूर्ण बात यह है कि ग्रह फलाफल के नियामक नहीं हैं, किन्तु सूचक हैं। अर्थात् ग्रह किसी को सुख-दुख नहीं देते, बल्कि आनेवाले सुख-दुख की सूचना देते हैं।" (*The most important aspect of Indian Jyotish is that planets are not the regulators of results, but indicators. That is, planets do not give joy or sorrow to anyone, but give information about the coming joy and sorrow.*)
- The texts affirm that it is a fundamental spiritual principle that **accumulated karmas (samskaras) are the sole true cause** of a living being's joy, sorrow, life, death, progress, and decline.

M4.6

कुण्डली फलादेश *Kundali Predictions Framework*

What predictive elements exist in these texts? List all statements that say 'if born under X nakshatra/celestial condition, then Y quality/challenge/opportunity manifests.' Build a prediction rule table: Condition → Predicted outcome. Separate by life domain: health, wealth, family, spirituality, karma load, potential for moksha.

The texts provided, particularly the analytical sections of Dr. Nemichandra Shastri's *Bharatiya Jyotish*, contain an extensive framework for *Phalita Jyotish* (predictive astrology). They outline explicit rules where specific celestial alignments at the time of birth indicate the manifestation of certain traits, physical marks, lifespans, and career opportunities.

Here is the prediction rule table extracted from the texts, separated by life domain.

1. Health (Longevity, Diseases, and Physical Marks)

Celestial Condition at Birth	
Malefic planet situated in its own house or Navamsha	Mani (Vrar birth.

MODULE 5

कर्म विश्लेषण · Karma Analysis Engine

Engine component: 8-karma mapping to celestial conditions for challenge/blessing analysis

The karma engine is what makes a Jain kundali fundamentally different from a Vedic one. Extract every karma-celestial connection.

M5.1

अष्ट कर्म — खगोलीय संबंध 8 Karma Types & Celestial Associations

For each of the 8 types of karma — (1) Gyanavaraniya, (2) Darshanavaraniya, (3) Vedaniya, (4) Mohaniya, (5) Ayushya, (6) Naam, (7) Gotra, (8) Antaraya — extract every celestial association mentioned in these texts. Which nakshatra, graha, tithi, or celestial condition is said to indicate a dominant or heavy form of each karma? Create a mapping table: Karma Type → Celestial Indicator → Effect on person.

Based on the provided texts, there is a crucial philosophical distinction to make: **The texts do not establish a direct, one-to-one terminological mapping between the 8 classical Jain karmas and specific planets, nakshatras, or tithis.**

The *Shatkhandagam* extensively defines the 8 karmas as an internal spiritual mechanism of the soul. Meanwhile, *Bharatiya Jyotish* maintains that astrology is a worldly science where celestial bodies act strictly as indicators (*Soochak*) of the soul's overall accumulated past karma (*Purvoparjit Karma*), rather than the creators or specific regulators of those individual karmas.

However, while the exact terms (like *Gyanavaraniya*) are not directly assigned to specific planets, the texts provide a robust astrological framework for predicting the **heavy or dominant effects** of what these 8 karmas govern (such as lifespan, disease, perception, and status) through specific houses (*Bhavas*), planetary afflictions, and Nakshatras.

Here is the mapping table connecting the nature of the 8 karmas to their specific celestial indicators and effects, as extracted from the astrological rules in the texts.

Mapping the 8 Karmas to their Celestial Indicators

M5.2

कर्म उदय काल *Karma Udaya – Fruition Timing*

What do these texts say about when karma comes to fruition (udaya)? Is fruition timing linked to celestial positions, nakshatra transits, or time cycles? Extract any framework that predicts when a particular karma will ripen for a person. Include references to karma-related time cycles from the Dhavala or Shatkhandagama.

Based on the provided texts, there are two distinct but complementary frameworks that explain when accumulated karma comes to fruition (*udaya*).

The canonical spiritual texts like the **Shatkhandagama** detail the exact internal, mathematical time-cycles of karma, completely independent of celestial bodies. Conversely, astrological texts like **Bharatiya Jyotish** use celestial positions and Nakshatra cycles as an external "clock" or indicator (*Soochak*) to predict when those internal karmas will ripen in a person's current life.

Here is the complete framework detailing the timing of karmic fruition.

1. The Internal Framework: Time Cycles in *Shatkhandagama*

According to the *Shatkhandagama* (and its principles elaborated in commentaries like the *Dhavala*), the timing of a karma's fruition is determined at the exact moment the soul binds the karma. The celestial bodies do not decide this; instead, the intensity of the soul's passions (*Kashayas*) mathematically programs a "dormancy period" and a "fruition period" into the karmic particles.

This is governed by two specific time cycles:

- **Abadha Kaal (The Period of Dormancy):** This is the precise interval between the moment a karma is bound and the moment it begins to give its fruit. The *Shatkhandagama*

M5.3

गुणस्थान — खगोल संबंध *Gunasthana & Celestial Framework*

Do these texts connect the 14 Gunasthanas (stages of spiritual development) with any celestial conditions? For example — is a person born under certain nakshatras more likely to be in a higher gunasthana, or more prone to fall? Extract every connection between spiritual stages and celestial/cosmological positions.

Based on the provided texts, there is a very clear and profound philosophical boundary drawn between astrology and spiritual liberation. **The texts do not connect a human being's specific Gunasthana (stage of spiritual development) to their birth nakshatra or celestial conditions.**

There are no astrological rules in these texts stating that birth under a certain nakshatra makes a person more likely to reach a higher Gunasthana or more prone to a spiritual fall.

However, the texts *do* establish a fascinating cosmological connection between the Gunasthanas and the celestial bodies themselves. Here is the complete breakdown of how these realms interact:

1. No Astrological Prediction for Human Spiritual Stages

The texts fundamentally separate *Phalita Jyotish* (predictive astrology) from the spiritual mechanics of the 14 Gunasthanas.

- **Astrology governs the worldly, not the spiritual:** As detailed in *Bharatiya Jyotish*, celestial conditions at birth strictly indicate worldly karmic payloads (*Laukik* matters)— such as lifespan, disease, wealth, and physical marks.
- **Gunasthanas are governed entirely by internal effort:** The *Shatkhandagama* defines the 14 Gunasthanas as internal states of the soul progressing toward purity. This

M5.4

कर्म प्रकृति *Karma Prakriti & Celestial Indicators*

From *Shatkhandagama* and *Dhavala* specifically, extract any discussion of karma prakriti (karma sub-types) that is linked to celestial conditions. Focus on: Ayushya karma (lifespan determination), Naam karma (body type, appearance), and Gotra karma (birth status). Are there any celestial indicators for these?

Based on the excerpts from the *Shatkhandagama* and *Dhavala* provided in the sources, there is a definitive answer to your question: **These specific canonical texts do not link any *karma prakriti* (karma sub-types) to celestial conditions, nor do they provide any celestial indicators for them.**

As established in our previous conversation, while astrological texts (like *Bharatiya Jyotish*) use planets and nakshatras as external "indicators" (*Soochak*) for how these karmas might manifest, the *Shatkhandagama* treats karma exclusively as an internal, spiritual, and molecular mechanism.

According to the *Shatkhandagama*, a soul binds karma by attracting karmic particles (*Karman Pudgala*) strictly through its own internal attachments, aversions, and passions (*Raag-Dvesh*), completely independent of planetary alignments.

Here is exactly how the *Shatkhandagama* defines and discusses the three specific karmas you requested, focusing on their internal mechanics rather than the stars:

1. Ayushya Karma (Lifespan Determination)

- **Definition:** The text defines Ayushya karma as the force that confines or holds the soul in a particular state of existence or realm (*Bhav*) for a set period.
- **Spiritual Mechanics:** Rather than being dictated by the 8th house or the Moon, the *Shatkhandagama* explains that the bondage of different lifespans (hellish,

M5.5

वर्तमान अर का प्रभाव *Effect of Current Ara on Karma*

What specific karma-related qualities characterize beings born in the current Avasarpini Ara (5th Ara, Dushama)? How does being born in this era affect: maximum possible lifespan, spiritual potential, ability to attain moksha, typical karma load? What does this mean for kundali analysis — should there be an 'era modifier' in the predictions?

Based on the cosmological and astrological frameworks provided in the texts (specifically *Bharatiya Jyotish* and canonical references like the *Tiloyapannatti*), beings born in the **5th Ara (Dusham / Sorrow)** of the current Avasarpini (descending) cycle face a vastly different, heavily restricted karmic landscape compared to those born in earlier eras.

The cosmic time cycle (*Kalachakra*) establishes the absolute macro-boundaries of human existence, which directly dictates how a soul's individual karma can manifest.

Here is how being born in the current 5th Ara specifically affects the requested qualities:

1. Maximum Possible Lifespan (*Ayushya Karma*)

- **The Limitation:** In the earlier eras of the Avasarpini cycle (such as the 1st and 2nd Aras, known as *Bhogbhumi*), humans possessed an "infinite or immeasurable lifespan" (*Aparimit Kaal*), reaching youth in just 49 days. However, in the 5th Ara, the maximum capacity of human *Ayushya Karma* (lifespan-determining karma) is drastically diminished.
- **Current Reality:** The texts indicate that in this current era of *Dusham*, human lifespans are capped at a little over **100 years**. Vitality, physical stature (height), and inherent bodily strength decline continuously throughout this 21,000-year period.

M5.6

मोक्ष योग *Moksha Yoga Indicators*

Extract every reference in these texts to celestial or karmic conditions that indicate a soul's potential for liberation (moksha). Are there specific nakshatras, celestial positions, or karma types whose absence or presence indicates nearness to moksha? What does a 'moksha-favorable' kundali look like in Jain framework?

Based on the provided Jain texts, there is a profound and strict philosophical boundary drawn between astrology and spiritual liberation. **The texts explicitly reject the concept that a specific nakshatra, celestial position, or a "Moksha-favorable" kundali can indicate or guarantee a soul's liberation.**

Instead, the texts establish that Moksha is a transcendental state achieved purely through internal spiritual effort (*Purushartha*), which completely overrides the celestial chart.

Here is the complete framework extracted from the texts regarding the celestial and karmic conditions for liberation.

1. The Illusion of a "Moksha-Favorable" Kundali

In the Jain framework, a birth chart (*Kundali*) maps a soul's accumulated worldly karma (*Adrishta* or destiny). However, the texts argue that this destiny is never absolute when it comes to liberation.

- **The Supremacy of Free Will:** *Bharatiya Jyotish* emphatically states that if the results of planets were mandatory to suffer, and human effort (*Purushartha*) was considered useless, then *"this life could never achieve liberation (Muktilabh)"*. A "Moksha-favorable" chart does not exist because Moksha requires breaking free from the very karmic mechanics the chart represents.
- **The Era Modifier (5th Ara):** Even if a person is

🙏 MODULE 6

तीर्थकर — ग्रह मैपिंग · Tirthankara — Graha Mappings

Engine component: Tirthankara-planet-nakshatra association table for Jain remedy engine

This replaces the Vedic navagraha devata system. Tirthankaras are the Jain equivalents for celestial lordship and remedies.

M6.1

तीर्थकर – नक्षत्र Tirthankara – Nakshatra Associations

Extract every association between the 24 Tirthankaras and specific nakshatras from any of these texts. Which Tirthankara was born under which nakshatra? Which Tirthankaras attained diksha, kevalgyan, or nirvana under which nakshatra? Build a complete table: Tirthankara → Birth Nakshatra → Diksha Nakshatra → Kevalgyan Nakshatra → Nirvana Nakshatra. Cite all sources.

The provided texts **do not** contain a mapping of the 24 Tirthankaras to specific nakshatras for their birth, diksha, kevalgyan, or nirvana. As noted earlier in our conversation, the texts strictly separate these supreme spiritual milestones from asterism-based astrology.

Instead, the *Shatabdi Panchang* meticulously records the timing of these events (known as the *Panch Kalyanaka*) exclusively by **Tithis (lunar days)** and the corresponding lunar months.

Since a table of Nakshatras cannot be built from these sources, below is the complete table of the 24 Tirthankaras' milestones built using the exact **Tithi framework** provided in the text:

Name of Tirthankara	Birth (Janma) Tithi		Diksha (Tapa) Tithi	
1. Rishabhanath	Chaitra	Krishna 9	Chaitra	Krish 9
2. Ajitnath	Magha	Shukla 10	Magha	Shuk 10
3. Sambhavanath	Kartika	Shukla 15	Margashirsha	Shukla 15
4. Abhinandannath	Magha	Shukla 12	Magha	Shuk 12
5. Sumatinath	Chaitra	Shukla 11	Vaishakha	Shukla 9

M6.2

तीर्थकर – ग्रह *Tirthankara – Graha Associations* (*Varur Tradition*)

Extract the Tirthankara-to-planet (graha) mappings from any of these texts – specifically look for the Varur tradition or similar. Which Tirthankara is associated with which celestial body? What is the basis of this association – is it birth nakshatra, celestial events at birth, or symbolic attributes? Provide the complete mapping table with source citations.

Based on the provided texts, **there is no mention of a Tirthankara-to-planet (graha) mapping, nor is there any reference to a "Varur tradition."**

Throughout the provided canonical and astrological sources (such as *Bharatiya Jyotish*, *Tiloyapannatti*, and the *Shatabdi Panchang*), the texts strictly separate the supreme spiritual state of the 24 Tirthankaras from the mechanical, karmic domain of the planets. As established in the texts, planets act merely as indicators (*Soochak*) of worldly karma and physical destiny, while the Tirthankaras represent the ultimate destruction of all karma and the transcendence of the cosmic cycle. Therefore, the sources do not assign planetary rulership to them.

Information Outside of Your Sources: Because you asked for this specific mapping, I can provide the traditional Jain astrological associations, but **you must note that this information is entirely from outside of your provided sources, and you may want to independently verify it.**

In broader Jain ritualistic traditions (specifically regarding *Navagraha Shanti* or planetary pacification), astrologers and devotees created a mapping between the 9 Planets and specific Tirthankaras.

The Basis of the Association: This external mapping is **not** based on the Tirthankaras' birth nakshatras or celestial events at their birth. Instead, it is based primarily on **symbolic physical attributes – specifically the birth complexion (Mangal) of the Tirthankaras**.

M6.3

तीर्थकर जन्म विवरण *Tirthankara Birth Celestial Details*

From Tiloyapannatti Chapter 4 and any other source, extract the complete birth details of all 24 Tirthankaras: birth nakshatra, birth tithi, birth vara, birth time (if mentioned), celestial configuration at birth. Create a comprehensive birth-data table for all 24 Tirthankaras with source verse citations.

Based on the provided sources, it is not possible to extract the complete astrological birth details (Nakshatra, Vara, Time, and Celestial configurations) for the 24 Tirthankaras from *Tiloyapannatti Chapter 4*.

While the introduction to the *Tiloyapannatti* explicitly notes that a highly detailed description of the 24 Tirthankaras is located in **Chapter 4 (Gathas 522 to 1280)**, the actual text and verses of Chapter 4 have not been included in the provided excerpts. Furthermore, the canonical texts provided firmly separate the Tirthankaras' spiritual milestones from predictive planetary astrology.

However, the **Brihat Shatabdi Panchang** provides a complete and authoritative table of the **Janma Kalyanaka (Birth Tithis)**, along with their birthplaces and parents.

Here is the comprehensive birth-data table constructed from the available texts:

Birth Details of the 24 Tirthankaras (As per Brihat Shatabdi Panchang)

#	Tirthankara	Father	M
1	Shri Rishabhanath	Shri Nabhirajah	Maru
2	Shri Ajitnath	Shri Jita Shatru	Vijay
3	Shri Parshvanath	Shri Kumbh	Sumati

M6.4

तीर्थकर अराधना – फलादेश *Tirthankara Aradhana & Prediction Connection*

What do these texts say about the benefits of worshipping specific Tirthankaras? Is there a connection between a person's birth nakshatra/celestial condition and which Tirthankara aradhana is most beneficial for them? Extract any statement that connects specific Tirthankara worship to specific karmic or celestial conditions.

The provided texts do not contain any framework that connects a person's birth nakshatra, celestial condition, or specific karmic afflictions to the worship (*aradhana*) of a specific Tirthankara for astrological benefits. There are no statements in these sources prescribing specific Tirthankara worship as a remedy for specific celestial conditions.

Instead, the texts maintain the philosophical boundary that **Tirthankaras are supreme beings who have conquered all karma, completely separate from the mechanical influences of the planets.**

When the worship of specific Tirthankaras is mentioned in the texts, it appears strictly in mathematical or cosmological contexts, rather than as astrological remedies:

- **Mathematical Word Problems:** The mathematical treatise *Ganitasarasangraha* uses the worship of Tirthankaras as a theme for calculating complex fraction problems. It describes faithful *shravakas* (lay followers) dividing piles of lotuses to offer them to specific Tirthankaras like Vrishabha, Sumati, Parshvanath, Munisuvratnath, Aristanemi (Neminath), and Shantinath. While the text praises Aristanemi as the one "**who destroyed all the eight kinds of karmas and who was beloved by the world**", this is purely an expression of universal devotion to set up a math equation, not a specific astrological remedy for a reader's karma.

M6.5

24 तीर्थकर गुण 24 Tirthankara Attributes for Engine

For each of the 24 Tirthankaras, extract from these texts: (1) identifying color (varna), (2) symbol (lakshana/chinha), (3) yaksha/yakshini associated, (4) tree (chaitya vriksha), (5) any celestial body specifically associated, (6) which karma type their worship is said to diminish, (7) any special mantra or stotra mentioned. This data will populate the remedy recommendation engine.

Based on the provided texts, it is **not possible** to extract the requested mapping (colors, symbols, yakshas, trees, or specific karma-remedy associations) for the 24 Tirthankaras to populate a remedy recommendation engine.

While the sources contain profound cosmological, mathematical, and astrological data, they do not merge the Tirthankaras into an astrological remedy framework. Here is what the texts actually say regarding your requested data points:

1. Missing Physical & Mythological Attributes The texts do not contain lists of identifying colors (*Varna*), symbols (*Lakshana*), associated Yaksha/Yakshinis, or specific trees (*Chaitya Vriksha*) for the 24 Tirthankaras.

- The most comprehensive list of the Tirthankaras in these sources is the "Panch Kalyanaka Tithi Sarni" in the *Brihat Shatabdi Panchang*. This table meticulously lists their parents, birthplaces, and the exact lunar days (*Tithis*) of their milestones, but omits their physical or mythological iconography.

2. No Celestial Associations As established in our earlier conversation, the provided texts strictly separate the supreme spiritual state of the Tirthankaras from the mechanical domain of planetary astrology. There are no planets or celestial bodies associated with specific Tirthankaras in these sources.

M6.6

इन्द्र – दिव्य सभा *Indra & Celestial Assembly at Tirthankara Birth*

These texts describe the celestial celebrations (Indra Mahotsava) at the birth of each Tirthankara.

What specific celestial configurations are described as occurring at Tirthankara births? Are specific nakshatras or planetary positions mentioned as conditions for a Tirthankara's birth? Extract all such references – these define the highest positive kundali configurations.

Based on the provided texts, there is a fundamental distinction to be made regarding your premise: **the texts explicitly do not describe the births of the Tirthankaras in terms of planetary positions, nakshatras, or "kundali" (horoscope) configurations.**

As established throughout our conversation, the canonical Jain texts and the astrological treatises provided strictly separate the supreme, karma-destroying nature of the Tirthankaras from the mechanical, karma-indicating domain of predictive astrology (*Phalita Jyotish*). Therefore, the concept of a "highest positive kundali configuration" is not applied to them in these texts.

However, the texts *do* vividly describe the "celestial conditions" at the time of a Tirthankara's birth. Instead of planets aligning in a horoscope, the texts describe a literal, physical assembly of the cosmos—where the celestial deities (Devas, Indras, and Dikkanyas) descend to Earth to perform specific ritual duties for the **Janma Kalyanaka** (Birth Festival).

Here are the specific celestial configurations and celebrations described occurring at a Tirthankara's birth, extracted from the **Tiloyapannatti (Pancham Mahadhikara)**:

The Assembly of the Dikkanyas (Directional Goddesses)

During the *Janma Kalyanaka* (the sacred birth festival), specific groups of celestial goddesses

✨ MODULE 7

उपाय / उपचार / पूजा पाठ · Remedies, Upayas & Puja Paths

Engine component: Complete remedy recommendation engine — vratas, pujas, stotras, tithi-based practices

The most practical module. These prompts extract every remedy, ritual, and practice that the engine can recommend.

M7.1

उपाय – सम्पूर्ण सूची *Complete Remedy List*

List EVERY remedy, spiritual practice, vrat, upavas, puja, aradhana, stotra, and ritual mentioned in any of these texts that is recommended for: (1) neutralizing negative karma, (2) enhancing positive karma, (3) seeking protection from inauspicious celestial conditions, (4) seeking blessings from Tirthankaras. For each remedy state: what condition it addresses, when it should be performed, how to perform it, expected benefit. Cite all sources.

Based on the provided texts, there is a strict philosophical division between internal spiritual practices (designed to destroy karma and achieve liberation) and external astrological remedies (designed to mitigate worldly celestial afflictions).

Here is the comprehensive list of every spiritual practice, vrat, and astrological remedy detailed in the sources:

1. Spiritual Practices for Neutralizing Negative Karma & Enhancing Positive Karma

The canonical texts (like the *Shatkhandagama* and *Tiloyapannatti*) emphasize that true karma neutralization cannot be achieved through astrological remedies, but only through internal purification and ascetic observances.

- **Pratikraman, Pratisaran, Parihara, Nivritti, Ninda, Garha, and Vishuddhi**
 - **Condition:** Addressed to neutralize daily sins, karmic bondage, and spiritual transgressions.
 - **When:** Practiced regularly as part of ascetic and lay duties.
 - **How:** Through deep internal self-reflection, repentance (*Ninda/Garha*), withdrawal from sinful activities (*Nivritti*), and returning to the pure state of the soul (*Pratikraman*).

M7.2

व्रत / उपवास *Vratas and Upavasa Practices*

Extract every vrat (vow) and upavasa (fasting) practice mentioned in these texts. For each provide: (1) name of vrat, (2) duration, (3) tithi or nakshatra on which it is observed, (4) which Tirthankara it is dedicated to, (5) karma type it is said to reduce, (6) specific benefits stated. Also note: are there vratas specifically associated with celestial events like eclipses, solstices, or specific nakshatras?

Based on the provided texts, specifically the *Brihat Shatabdi Panchang* and *Tiloyapannatti*, here is the comprehensive extraction of the *vrats* (vows) and *upavasas* (fasts) mentioned.

It is important to note upfront regarding your specific criteria: **The provided texts strictly detail the calendrical timing (tithi/duration) of these vrats, but they do not assign these recurring fasts to specific Tirthankaras, nor do they map them to the reduction of specific karma types.**

Philosophically, the *Tiloyapannatti* explicitly states that observing vrats, rules, and fasts without true spiritual knowledge (*paramartha jnana*) is merely "child's play" (*balvrat*). Rather than destroying karma, such physical fasts only result in the binding of **Punya Karma** (meritorious/positive karma) and cannot be the direct cause of Moksha on their own.

Here are the specific Vrats and Parvas detailed in the texts:

1. Jain Vrats and Fasting Cycles

Dashalakshan Parva

- **Duration:** 10 days.
- **Tithi:** Observed three times a year. It begins on the *Shukla Panchami* (5th day of the bright half) and ends on the *Shukla Chaturdashi* (14th day) in the lunar months of Magh, Chaitra, and Bhadrapada.

Ashtahnika Parva

M7.3

स्तोत्र / मंत्र *Stotras & Mantras*

List every stotra, mantra, or sacred text that is prescribed for specific problems or karma conditions in these texts. If a text says 'recite X stotra for Y benefit' or 'chant X for protection from Y celestial condition,' extract that connection. Also: which stotras are associated with which Tirthankaras, and what specific karma-related benefits are claimed?

Based on the provided texts, there is a very specific distinction made between mantras used for worldly/astrological problems and devotion directed toward the Tirthankaras.

The texts **do not** contain an extensive list of traditional *stotras* (hymns) prescribed for specific worldly problems. However, they do provide a highly specific, mathematical framework of **Bija Mantras (seed syllables) for planetary pacification**, as well as a specific **Vedic mantra for birth-doshas**.

Here is the complete extraction of every mantra and sacred text prescribed for specific conditions in the sources:

1. Mantras for Protection from Inauspicious Celestial Conditions (Navagraha)

To neutralize negative karma manifesting as malefic planetary influences, the *Brihat Shatabdi Panchang* explicitly prescribes specific Navagraha (Nine Planets) mantras. The texts prescribe exactly how many times each must be chanted to achieve the benefit of pacifying that specific planet's dosha.

- **For Malefic Sun (Surya):**
 - **Mantra:** "ॐ ह्रां ह्रीं ह्रौं सः सूर्याय नमः" (Om Hram Hreem Hroum Sah Suryaya Namah)
 - **Prescription:** Chant 7,000 times.
- **For Malefic Moon (Chandra):**
 - **Mantra:** "ॐ श्रां श्रीं श्रौं सः चन्द्रमसे नमः" (Om Shram Shreem Shroum Sah

M7.4

तिथि-वार आधारित पूजा *Tithi & Vara Based Puja Recommendations*

Extract all puja recommendations that are linked to specific tithis, varas, or nakshatras. For example: which tithi is best for which Tirthankara's puja? On which vara should which puja be performed? Are there specific nakshatra-based practices? Create a Tithi-Puja table, a Vara-Puja table, and a Nakshatra-Puja table.

Based on the provided texts, there is a crucial philosophical distinction to keep in mind: **The texts do not prescribe worshipping specific Tirthankaras as an astrological remedy for specific days.** Because Tirthankaras have transcended the karmic cycle, their worship is an act of pure spiritual devotion rather than a transactional remedy.

However, the texts— specifically the *Brihat Shatabdi Panchang* and the *Tiloyapannatti*— do heavily regulate the **timing** of worship. All Jain spiritual festivals (*Parvas*), fasts (*Vrats*), and Tirthankara anniversaries (*Kalyanakas*), as well as Hindu rituals, are strictly locked to specific Tithis, Varas, and Nakshatras.

Here are the comprehensive tables extracting every time-linked puja, vrat, and spiritual observance mentioned in the texts.

1. Tithi-Puja Table (Lunar Day Practices)

This table outlines the specific lunar days (*Tithis*) prescribed for major pujas, Tirthankara anniversaries, and fasts.

Tithi (Lunar Day)			Prescribed Puja/Vrat/
Shukla	Ashtami	to	Ashtahnika Parva & Na
Purnima*(8th to 15th of Bright Half)*			Dweep Puja

M7.5

समस्या – उपाय मैपिंग *Problem-to-Remedy Mapping*

Create a complete problem-to-remedy mapping table from all these texts. The format should be: Life Problem or Karma Type → Recommended Jain Remedy. Categories to cover: health problems, financial difficulties, family discord, obstacles in work, spiritual stagnation, fear/anxiety, legal problems, enemy issues, and death/grief. Only include remedies explicitly mentioned in these Jain texts.

Based on the provided texts, there is a strict philosophical and practical division regarding remedies. The canonical Jain texts (*Shatkhandagama, Tiloyapannatti*) **do not prescribe transactional remedies for specific worldly problems** like lawsuits, enemies, or financial ruin, as they focus entirely on destroying all karma to attain liberation.

Meanwhile, the astrological texts (*Bharatiya Jyotish, Brihat Shatabdi Panchang*) attribute all worldly suffering to malefic planetary alignments (which reflect past karma) and provide a system of **Navagraha (Nine Planets) pacification** to mitigate general hardships.

Because the prompt strictly requires using *only* remedies explicitly mentioned in these texts, several specific worldly categories have no direct mapping. Here is the complete problem-to-remedy mapping table as extracted from the sources:

Problem-to-Remedy Mapping Table

Life Problem or Karma Type	Recommended Jain Remedy
Health Problems & Threat to Life (Arishta / Balarishta)	1. Mantra recitation 2. Pooja 3. Charity 4. Fasting 5. Pilgrimage 6. Protection by deities 7. Vedic rituals 8. Astrological remedies 9. Remedies from Agastya Smriti 10. Remedies from Kalpa Sutra 11. Remedies from Bhagavata Purana 12. Remedies from Mahabharata 13. Remedies from Ramayana 14. Remedies from Bhagavad Gita 15. Remedies from Upanishads 16. Remedies from Vedas 17. Remedies from Smritis 18. Remedies from Puranas 19. Remedies from Itihasas 20. Remedies from other Jain texts

M7.6

पर्युषण / चातुर्मास *Paryushana & Chaturmas Practices*

What do these texts say about Paryushana and Chaturmas in relation to celestial positions? Are these observances linked to specific astronomical events? What special puja paths, stotras, or vratas are described for these periods? How do the celestial conditions during Chaturmas affect the potency of spiritual practices?

The texts establish that Paryushana, Chaturmas, and the associated Dashalakshan Parva are strictly linked to the mathematical lunar calendar (Tithis), rather than to specific planetary transits or astrological "potency" modifiers.

Here is what the texts detail regarding these observances:

1. Link to Specific Astronomical Events (The Lunar Calendar)

The *Brihat Shatabdi Panchang* meticulously defines the exact lunar days (*Tithis*) on which these periods must begin and end. They are not triggered by a planet entering a specific zodiac sign, but by the phases of the Moon:

- **Chaturmas (The 4-Month Retreat):** The texts explicitly state that Chaturmas begins on **Ashadha Shukla Chaturdashi** (the 14th day of the bright half of the lunar month of Ashadha) and concludes on **Kartika Krishna Trayodashi** (the 13th day of the dark half of Kartika).
- **Paryushana Parva:** This specific 7-day observance begins on **Bhadrapada Krishna Trayodashi** (the 13th day of the dark half of Bhadrapada) and ends on **Bhadrapada Shukla Chaturthi** (the 4th day of the bright half).
- **Dashalakshan Parva:** Often overlapping with the broader Paryushana season, the primary *Bhadrapadiya* Dashalakshan begins the very next day on **Bhadrapada**

M7.7

विशेष समस्याओं के उपाय *Remedies for Specific Celestial Afflictions*

Extract every remedy prescribed for specific inauspicious celestial conditions. For example: remedies for being born under an inauspicious nakshatra, remedies for eclipse-related doshas, remedies for specific tithi-related problems. Also: are there any Jain equivalents to concepts like Mangal dosha, Kaal Sarp dosha, or Pitru dosha — and if so, what are their Jain names and remedies?

Remedies for Specific Inauspicious Celestial Conditions

Based on the provided texts (*Bharatiya Jyotish* and the *Brihat Shatabdi Panchang*), the approach to inauspicious celestial conditions relies on a combination of specific Vedic mantras, Navagraha (Nine Planets) pacification, and strict avoidance (*Varjit Kaal*).

Here are the remedies prescribed for the specific conditions you mentioned:

1. Remedies for Inauspicious Birth Nakshatras (Mula-Gandant)

Birth under certain severe junction asterisms—specifically the end of Ashlesha, Jyeshtha, and Revati, and the beginning of Mula, Magha, and Ashvini—creates a life-threatening karmic affliction known as **Gandant Dosha** or **Mula-Gandant**.

- **The Remedy:** For a child born under the highly malefic Mula Nakshatra, *Bharatiya Jyotish* explicitly prescribes chanting a specific Atharva Veda mantra dedicated to Agni (the Fire God) to pacify the dosha and protect the child.
- **The Mantra:** "ज्येष्ठघ्नां जातो विचृतो र्यमस्य मूलवर्हणात् परिपालयेन्म। अत्येनं नेषददुरितानि विश्वा दीर्घायुत्वाय शतशारदाय ॥".
- **Expected Benefit:** The text states this prayer removes the newborn's affliction, protects them from evil, and grants a full lifespan of 100 years.

NotebookLM Artifact Generation Prompts

After completing all 7 modules of chat extraction, use these prompts to generate structured artifacts from NotebookLM. These artifacts become your engine's source documents.

Jain Jyotish Complete Study Guide

Prompt to paste:

Generate a comprehensive Study Guide covering all astrological, astronomical, and karmic-predictive content from these texts. Organize into sections: (1) Jain Cosmological Framework, (2) Celestial Bodies & Jyotishi Devs, (3) Nakshatra System, (4) Time & Calendar System, (5) Birth Analysis Framework, (6) Karma-Celestial Connections, (7) Tirthankara Associations, (8) Remedies & Spiritual Practices. Include all key terms in Prakrit/Sanskrit/Hindi with definitions.

Here is a comprehensive Study Guide covering the astrological, astronomical, and karmic-predictive frameworks extracted from the provided Jain and Bharatiya Jyotish texts.

Study Guide: Jain Jyotish & Karmic-Predictive Frameworks

1. Jain Cosmological Framework (Loka-Akasha)

The Jain texts describe a highly structured, uncreated universe (*Loka*) bound by strict mathematical proportions and cosmic laws.

- **Triloka (The Three Worlds):** The universe is divided into three primary realms:
 - **Urdhva Loka:** The upper world, containing the heavenly realms (*Swarga*) where celestial beings reside.
 - **Madhya Loka:** The middle world, containing Earth, humans, and animals. It consists of innumerable concentric islands and oceans, with **Jambudvipa** (the central island) at its core.
 - **Adho Loka:** The lower world, containing seven hells (*Narakas*) characterized by descending levels of darkness and suffering (e.g., Ratna Prabha, Sharkara Prabha).
- **Cosmic Measurements:** Distances are measured in vast units such as **Yojana** and **Rajju** (a cosmic unit representing the distance a deity can fly in six months).

2. Celestial Bodies & Jyotishi Devs

In the Jain framework, celestial bodies are not merely physical spheres but are luminous celestial chariots (*Vimanas*) inhabited by astral deities known as **Jyotishi Devas**.

- **Surya / Suriya (The Sun):** Acts as the **Pratindra** (co-chief) of the Jyotishi Devas. Astrologically, it is considered a *Krur* (malefic) king of planets.
- **Chandra / Chandima (The Moon):** Acts as the primary **Indra** (chief) of the Jyotishi Devas. Astrologically, it is a benefic *Shubh* planet when full, and a king alongside the Sun.
- **Mangal (Mars):** The Commander-in-Chief (*Senapati*); malefic (*Paap*); causes wounds (*Vrana*).
- **Budh (Mercury):** The Prince (*Yuvaraj*); a benefic planet that adapts to conjunct planets.
- **Guru / Brihaspati (Jupiter):** The Minister (*Mantri*); highly benefic; acts as an *Arishta-nashak* (destroyer of misfortunes).

Jain Kundali Engine — Developer Briefing

Prompt to paste:

Generate a Briefing Document that a software developer could use to build a Jain Kundali Core Engine. Include: (1) Complete data model — all entities and their attributes, (2) Calculation methods — how tithis, nakshatras, and time are computed in Jain system, (3) Prediction rules — if-then rules for life analysis, (4) Remedy logic — how remedies map to conditions, (5) Tirthankara mapping table, (6) Key differences from Vedic system that affect technical implementation.

Here is the Briefing Document for building the Jain Kundali Core Engine, based strictly on the cosmological, astrological, and mathematical frameworks provided in the source texts.

Software Developer Briefing Document: Jain Kundali Core Engine

1. Core Data Model (Entities & Attributes)

To build the engine, the relational database must map the physical celestial bodies, time units, and internal spiritual mechanics (Karmas).

Entity: Celestial Bodies (Jyotishi Devas)

- `graha_id` (PK)
- `sanskrit_name` (e.g., Surya, Chandra, Mangal, Budh, Guru, Shukra, Shani, Rahu, Ketu)
- `prakrit_name` (e.g., Suriya, Chandima, Buha, Sukka, Sani)
- `nature` (Enum: Shubh/Benefic, Ashubh/Malefic, Krur/Fierce, Paap/Sinful)
- `cabinet_role` (Enum: Pratindra, Indra, Senapati, Yuvaraj, Mantri, Bhritya)
- `residence` (Value: Jyotish Loka)

Entity: Karmic Payload (The 8 Karmas)

- `karma_id` (PK)
- `karma_type` (Enum: Gyanavaraniya, Darshanavaraniya, Vedaniya, Mohaniya, Ayushya, Naam, Gotra, Antaraya)
- `function_description` (e.g., "Obscures knowledge", "Determines Lifespan", "Creates Delusion")

Entity: Asterisms (Nakshatras)

- `nakshatra_id` (PK)
- `name` (27 primary divisions plus Abhijit as the 28th)

Jain/Prakrit Name	Sanskrit Name	Hindi Name	Type	Loka/Location	Nature (Shubh/Ashubh)	Karma Association	Tirthankara Association	Remedy/Puja	Source Text	Verse Reference
Suriya / Sura	Surya / Ravi	Surya	Graha (Pratin dra)	Jyotis h Loka	Ashub h / Krur	Indicator of Purvop arjit Karma; associated with eye diseases.	None (Liberated from planetary rulership)	Chant "Om Hram Hreem Hroum Sah Suryaya Nama h" 7000x; Donate wheat, jaggery; Wear Ruby.	Bharatiya Jyotish, Shatabdi Panchang, Tiloyapannatti	
Chandima / Chandana	Chandra / Indu	Chandrama	Graha (Indra)	Jyotis h Loka	Shubh (Full) / Ashubh (Waning)	Indicator of Karma; associated with infant mortality (Balari shta) if afflicted.	None	Chant "Om Shram Shreem Shroum Sah Chandramas e Nama h" 11000x; Donate rice, mishri; Wear Pearl.	Bharatiya Jyotish, Shatabdi Panchang, Tiloyapannatti	

Mangal	Mangal / Bhaum	Mangal	Graha (Senapati)	Jyotish Loka	Ashubh / Paap	Indicator of Karma; causes deep wounds/scar s (Vrana) and Arishta.	None	Chant "Om Kram Kreem Kroum Sah Bhaum aya Nama h" 10000x; Donate masoor dal; Wear Coral.	Bharatiya Jyotish, Shatabdi Panchang
--------	----------------	--------	------------------	--------------	---------------	--	------	---	--------------------------------------

Budha	Budha	Budha	Graha (Yuvaraj)	Jyotish Loka	Shubh (Adapt s to conjunct)	Indicator of Purvoparjit Karma.	None	Chant "Om Bram Breem Broum Sah Budha ya Nama h" 9000x; Donate moong dal; Wear Emerald.	Bharatiya Jyotish, Shatabdi Panchang, Tiloyapannatti
-------	-------	-------	-----------------	--------------	-----------------------------	---------------------------------	------	--	--

Guru	Brihaspati / Guru	Guru	Graha (Mantri)	Jyotish Loka	Shubh (Arisht a-nashak)	Indicator of Karma; highly auspicious, destroys misfortunes.	None	Chant "Om Gram Greem Groum Sah Gurave Nama h" 19000 x; Donate chana dal; Wear Yellow Sapphire.	Bharat iya Jyotish, Shatabdi Panchang
Sukka	Shukra	Shukra	Graha (Mantri)	Jyotish Loka	Shubh	Indicator of Purvoparjit Karma.	None	Chant "Om Dram Dreem Droum Sah Shukra ya Nama h" 16000 x; Donate rice, mishri; Wear Diamond.	Bharat iya Jyotish, Shatabdi Panchang, Tiloyapannati

Sani	Shani	Shani	Graha (Bhritya)	Jyotish Loka	Ashubh /Kru	Indicator of Karma; primary signifi cator of sorrow, delays, and hardsh ip.	None	Chant "Om Pram Preem Proum Sah Shana ye Nama h" 23000 x; Donat e urad dal, musk; Wear Blue Sapphi re.	Bharat iya Jyotish, Shatab di Panch ang, Tiloya pannat ti
------	-------	-------	--------------------	-----------------	----------------	---	------	--	--

Rahu	Rahu	Rahu	Shadow Graha	Jyotish Loka	Ashubh / Paap	Indicator of Karma; obscur es the Moon, cause s lunar eclipse s.	None	Chant "Om Bhram Bhree m Bhrou m Sah Rahav e Nama h" 18000 x; Donat e sesam e (til); Wear Hesso nite.	Bharat iya Jyotish, Shatab di Panch ang
------	------	------	-----------------	-----------------	------------------	--	------	---	---

Ketu	Ketu	Ketu	Shadow Graha	Jyotish Loka	Ashubh / Paap	Indicator of Karma; obscures the Sun, causes solar eclipses.	None	Chant "Om Sram Sreem Sroum Sah Ketave Nama h" 17000 x; Donate 7-grain s, til; Wear Cat's Eye.	Bharat iya Jyotish, Shatabdi Panchang
Assini	Ashvini	Ashvini	Nakshatra	Jyotish Loka	Ashubh (Junction)	Birth at junction point causes Mula-Gandant Dosha (Life-threatening affliction).	None	Mula-Gandant Shanti Puja (Atharva Veda mantra to Agni).	Bharat iya Jyotish
Bharani	Bharani	Bharani	Nakshatra	Jyotish Loka	Ugra (Fierce)	Indicator of Purvoparjit Karma.	None	General planetary pacification.	Bharat iya Jyotish

Remedies & Upaya Master Data Table

Prompt to paste:

Generate a Data Table of ALL remedies and spiritual practices from these texts. Columns: Remedy/Practice Name | Hindi/Sanskrit Name | Type (Vrat/Puja/Stotra/Aradhana) | Timing (Tithi/Vara/Nakshatra) | Tirthankara Dedicated To | Problem/Karma it Addresses | Specific Benefit Stated | Duration | Source Text | Verse Reference.

Here is the comprehensive Data Table of all remedies and spiritual practices extracted from the provided texts and conversation history.

According to the philosophical framework established in these sources, practices are strictly divided: **astrological/Vedic remedies** mitigate worldly hardships caused by planets and birth asterisms, while **Jain spiritual practices** focus entirely on destroying internal karma for spiritual purification, completely independent of planetary conditions.

Remedy /Practice Name	Hindi/Sanskrit Name	Type (Vrat/Puja/Stotra/Aradhana)	Timing (Tithi/Vara/Nakshatra)	Tirthankara Dedicated To	Problem /Karma it Addresses	Specific Benefit Stated	Duration	Source Text	Verse Reference
Sun Pacification	Surya Shanti	Mantra & Dan	Any time	None (Sun/Surya)	Malefic Sun / Eye Diseases	Pacifies the Sun; Chant "Om Hram Hreem Hroum Sah Suryaya Namah" 7,000x; Donate wheat, jaggery; Wear Ruby.	7,000 chants	Brihat Shatabdi Panchang	p.16
Moon Pacification	Chandra Shanti	Mantra & Dan	Any time	None (Moon/Chandra)	Malefic Moon / Infant hardships	Pacifies the Moon; Chant "Om	11,000 chants	Brihat Shatabdi Panchang	p.16

Quick Reference — All 42 Prompts at a Glance

Use this page as your checklist. Tick off each prompt as you complete it in NotebookLM.
